Education

B.Sc. University of Chittagong, Computer Science & Engineering
(Engg.) • CGPA: 3.43/4.0

2025

Technical Projects

Voter Slip Generator – Automated PDF-to-Slip Web Application

2026

- Developed an end-to-end web application that processes layout-specific PDFs to extract Bengali text and generate structured JSON for automated voter slip creation with customizable designs, using a backend pipeline built with **YOLOv8n**, **Python**, and **Tesseract OCR**, exposed via APIs to a **React (Vite) + TypeScript** frontend deployed on **Vercel**.

Krishibid – Crop Leaf Disease Detection App

2024

- Built a mobile app for real-time crop disease prediction using a TensorFlow Lite model, with UI designed in [Figma](#) and implemented in **React Native** and **Firebase**, featuring real-time comments, reactions, ratings, Google Maps integration, pagination, and animations via Reanimated and GSAP.

[Try APK](#)

Result Processing System

2024

- Developed result processing modules and dashboards focused on performance, usability, and accurate data presentation, building the frontend with **React**, **TypeScript**, **Tailwind CSS**, and **Shadcn UI** while collaborating with backend and database teams under Agile methodology.

Thesis

Cotton Leaf Disease Detection and Classification Using Fine-tuned ResNet50 Architecture

2025

- Fine-tuned and evaluated deep learning models for cotton leaf disease detection using **Python**, **TensorFlow**, and **Scikit-learn** across varied augmentation, class balancing, dropout, and learning rate settings.
- Deployed the best-performing model on Hugging Face Spaces with a Gradio interface and integrated it into a **React**-based web application hosted on **Vercel**, enabling image-based inference via API communication.

Technical Skills

Programming Languages: Python, C, C++, JavaScript

Machine Learning & Deep Learning: TensorFlow, Keras, PyTorch, Scikit-learn, NumPy, OpenCV, Matplotlib, Seaborn, LangChain, Hugging Face, RAG, Prompt Engineering, LLMs, Computer Vision, Transfer Learning

Web & Application Development: React, Next.js, React Native, RESTful APIs, GraphQL, Firebase, MongoDB, Figma

Development Tools & Engineering Practices: Git/GitHub, Docker, VS Code, Google Colab, n8n, Agile Development, SDLC, API Integration, Technical Documentation

Problem Solving & Competitive Programming

- Participated in programming contests including ICPC Dhaka Regional Online Preliminary (2019–2024), Engineering Day CU, CSE Fest (CUET), and EDU Fest.
- Solved over 300+ problems on [Codeforces](#), [Uva](#), [LeetCode](#), [CodeChef](#) and [AtCoder](#).

Professional Certifications

- Fundamentals of AI Agents Using RAG and LangChain by IBM

Achievements & Activities

- Participant and National Round Qualifier – 8th Dutch-Bangla Bank–Prothom Alo Bangladesh Physics Olympiad, 2018.
- Team Lead – Design and Marketing Team, CSEPL 2022 & 2023.
