Experience

Freelance Video Editor & Graphic Designer, Upwork / Fiverr

- Delivered creative, data-driven media solutions for international clients, combining visual storytelling, design consistency, and analytical precision.

Remote
2021 – Present

UI Designer (Contract Project), ZAS Pharma

- Designed an accessible, user-centered mobile interface in Figma for a multinational client, ensuring seamless alignment with functionality.

Remote
2024
[Figma Prototype](#)

Education

B.Sc. University of Chittagong, Computer Science and Engineering
(Engg.) • CGPA: 3.43/4.0

2025

Technical Projects

QuickHire – Full-Stack Job Board Platform

- Implemented a clean, responsive job board interface by translating a detailed [Figma](#) design into a production frontend using **Next.js (App Router) + TypeScript + Tailwind CSS**, enabling employers to manage listings and applicants and job seekers to browse and apply for jobs, integrated with a **Node.js (Express) + MongoDB** backend and deployed on **Vercel**.

Voter Slip Generator – Automated PDF-to-Slip Web Application

- Developed an end-to-end web application that processes layout-specific PDFs to extract Bengali text and generate structured JSON for automated voter slip creation with customizable designs, using a backend pipeline built with **YOLOv8n, Python, and Tesseract OCR**, exposed via APIs to a **React (Vite) + TypeScript** frontend deployed on **Vercel**.

Krishibid – Crop Leaf Disease Detection App

- Built a mobile app for real-time crop disease prediction using a TensorFlow Lite model, with UI designed in [Figma](#) and implemented in **React Native** and **Firebase**, featuring real-time comments, reactions, ratings, Google Maps integration, pagination, and animations via Reanimated and GSAP.

[Live Demo on Web](#)
[Try APK](#)

Result Processing System

- Designed UI wireframes in **Figma** and built user-focused result dashboards using **React, TypeScript, Tailwind CSS**, and **Shadcn UI**, coordinating closely with backend and database teams in an Agile environment.

Thesis

Cotton Leaf Disease Detection and Classification Using Fine-tuned ResNet50 Architecture

- Fine-tuned and evaluated deep learning models for cotton leaf disease detection using **Python, TensorFlow**, and **Scikit-learn** under varied augmentation, class balancing, dropout, and learning rate settings, and deployed the best-performing model on Hugging Face Spaces with a Gradio interface, integrating it into a **React**-based web application hosted on **Vercel** to enable image-based inference via APIs.

Problem Solving & Competitive Programming

- Participated in programming contests including ICPC Dhaka Regional Online Preliminary (2019–2024), Engineering Day CU, CSE Fest (CUET), and EDU Fest.
- Solved over 300+ problems on [Codeforces](#), [UVA](#), [LeetCode](#), [HackerRank](#), [CodeChef](#) and [AtCoder](#).

Achievements & Activities

- Participant and National Round Qualifier – 8th Dutch-Bangla Bank–Prothom Alo Bangladesh Physics Olympiad, 2018.
- Team Lead – Design and Marketing Team, CSEPL 2022 & 2023, organized by the CSE Department, University of Chittagong.
